Com ent. The reorganization of VPD 1213 generally corresponds with other information on VPDs following their reorganization. However, the following deviations occur: first, the infantry Abtoilungen usually have 3 rifle Zuogo and 6 light machine guns, rather than 2 rifle ouege and 1 heavy machine gun ougg second, signal-communications Zug, engineer Zug and mortar company are usually subordinate to the Kommandos rather than to the Abteilungen, with the infantry Kommando having only 1 mortar company and 1 heavy machine gun company instead of the 2 mortar batteries mentioned in the present report; and third, the recornaissance squad is probably assigned to the infantry Korusndo rather than to the infantry Abtoilung. It is believed that there has been a motor transport section and a medical section assigned to each VPD for some time. The organization of the artillery Kom ando and the existence of h Conderabteilungen, na wily a recornaissance unit, an AT artillery unit, an AAA unit and an armoved unit, agrees with previous information. The heavy weapons and motorvehicle equipment continues to be sufficient for only the barest necessities of training. The personnel strength of 1,800 to 2,000 men exceeds the previous strength by 300 to 500 men and is probably overestimated. Information of November 1951 specified the strongth of the VPD in Prenzlau at only 1,500 police,
